

# MadGraph Tutorial

Olivier Mattelaer

UIUC

Johan Alwall

NTU

# I. Plan of this tutorial

- ➔ Install MadGraph 5
- ➔ Generate events.
- ➔ Scan in mass

# Install MadGraph 5!

- <https://launchpad.net/madgraph5>
  - ➔ 1.5.10
  - ➔ 2.0.0.beta3 -> (NLO available !)
- untar it (`tar -xzpvf TUTO_model.tgz`)
- launch it ( `$ ./bin/mg5`)
- learn it!
  - ➔ Type tutorial and follow instructions

# Where to find help?

- Ask me !
- Use the command “help” / “help XXX”
  - ➔ “help” tell you the next command that you need to do.
- Launchpad:
  - ➔ <https://answers.launchpad.net/madgraph5>
  - ➔ FAQ: <https://answers.launchpad.net/madgraph5/+faqs>

# What are those cards?

- **param\_card**: model parameters
  - **run\_card**: beam/run parameters and cuts
- ➔ <https://answers.launchpad.net/madgraph5/+faq/2014>

# Check list

- How do you change
  - ➔ top mass
  - ➔ top width
  - ➔ W mass
  - ➔ beam energy
  - ➔ pt cut on the lepton
  - ➔ pdf

# Exercise I : Syntax

- What's the meaning of the order QED/QCD
- What's the difference between
  - ➔  $p p \rightarrow t t^{\sim}$
  - ➔  $p p \rightarrow t t^{\sim} \text{ QED}=2$
  - ➔  $p p \rightarrow t t^{\sim} \text{ QED}=0$

# Exercise II: Syntax

- Generate the cross-section and the distribution (invariant mass) for
  - ➔  $pp \rightarrow e^+ e^-$
  - ➔  $pp \rightarrow z, z \rightarrow e^+ e^-$
  - ➔  $pp \rightarrow e^+ e^- \gamma z$
  - ➔  $pp \rightarrow e^+ e^- / z$

**Hint** : To have automatic distributions:  
`mg5> install MadAnalysis`

# Exercise III: scripting

- Look at the cross-section for the previous process for 3 different mass points.
  - ➔ **hint:** you can edit the param\_card/run\_card via the “set” command [After the launch]
  - ➔ **hint:** All command [including answer to question] can be put in a file.

Let's start

# Exercises

1. Follow the tutorial

2. Understand the cards

3. compare (diagram and cross-section)

$$\rightarrow p p \rightarrow t t^{\sim}$$

$$\rightarrow p p \rightarrow t t^{\sim} \text{ QED}=0$$

$$\rightarrow p p \rightarrow t t^{\sim} \text{ QED}=2$$

4. compare (distributions)

$$\rightarrow p p \rightarrow e^+ e^-$$

$$\rightarrow p p \rightarrow z, z \rightarrow e^+ e^-$$

$$\rightarrow p p \rightarrow e^+ e^- \text{ } \$ z$$

$$\rightarrow p p \rightarrow e^+ e^- / z$$

5. compute the cross-section

$$\rightarrow \text{for } M_{\text{top}} \text{ between } 160 \text{ to } 180 \text{ GeV}$$

$\rightarrow$  No scripting!

# Solution

# Exercise I : Syntax

- What's the meaning of the order QED/QCD
- What's the difference between
  - ➔  $p p \rightarrow t t^{\sim}$
  - ➔  $p p \rightarrow t t^{\sim} \text{ QED}=2$
  - ➔  $p p \rightarrow t t^{\sim} \text{ QED}=0$

# Solution I : Syntax

- What's the meaning of the order QED/QCD
  - By default MG5 takes the lowest order in QED!
  - $p p > t t^{\sim} \Rightarrow p p > t t^{\sim} \text{ QED}=0$
  - $p p > t t^{\sim} \text{ QED}=2$ 
    - ◆ additional diagrams (photon/z exchange)

$p p > t t^{\sim}$

Cross section (pb)
<u><math>555 \pm 0.84</math></u>

$p p > t t^{\sim} \text{ QED}=2$

Cross section (pb)
<u><math>555.8 \pm 0.91</math></u>

No significant QED contribution

## Exercise II: Syntax

- Generate the cross-section and the distribution (invariant mass) for
  - ➔  $pp \rightarrow e^+ e^-$
  - ➔  $pp \rightarrow z, z \rightarrow e^+ e^-$
  - ➔  $pp \rightarrow e^+ e^- \gamma z$
  - ➔  $pp \rightarrow e^+ e^- / z$

**Hint** :To have automatic distributions:  
`mg5> install MadAnalysis`

$pp \rightarrow e^+ e^-$   
 $m(e^+,e^-)$

(16 diagrams)

$pp \rightarrow z, z \rightarrow e^+ e^-$   
 $m(e^+,e^-)$

(8 diagrams)

$pp \rightarrow e^+ e^- / z$   
 $m(e^+,e^-)$

(8 diagrams)

No Z

$pp \rightarrow e^+ e^- \cancel{z}$

$m(e^+,e^-)$

(16 diagrams)

Z- onshell veto

$pp \rightarrow e^+e^-$   
 $m(e^+e^-)$

(16 diagrams)

Correct Distribution

$pp \rightarrow z, z \rightarrow e^+e^-$   
 $m(e^+e^-)$

(8 diagrams)

$pp \rightarrow e^+e^- / z$   
 $m(e^+e^-)$

(8 diagrams)

No Z

$pp \rightarrow e^+e^- \cancel{z}$   
 $m(e^+e^-)$

(16 diagrams)

Z- onshell veto

**Z Peak**

$pp \rightarrow e^+e^- / z$

**NO Z Peak**

**No Z**

$pp \rightarrow e^+e^- \cancel{z}$

**Z- onshell veto**

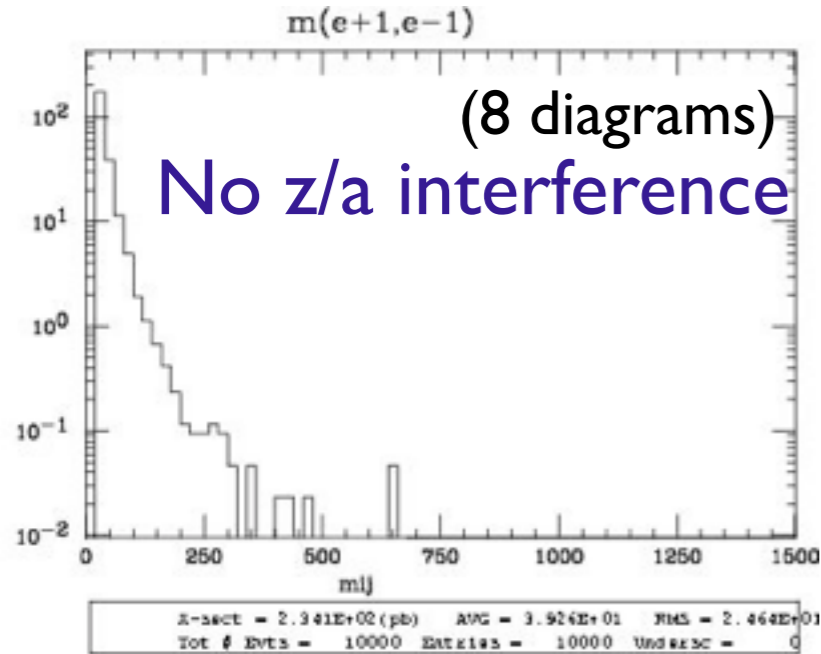

**Z Peak**

$pp \rightarrow e^+e^- / z$   
 $m(e^+e^-)$

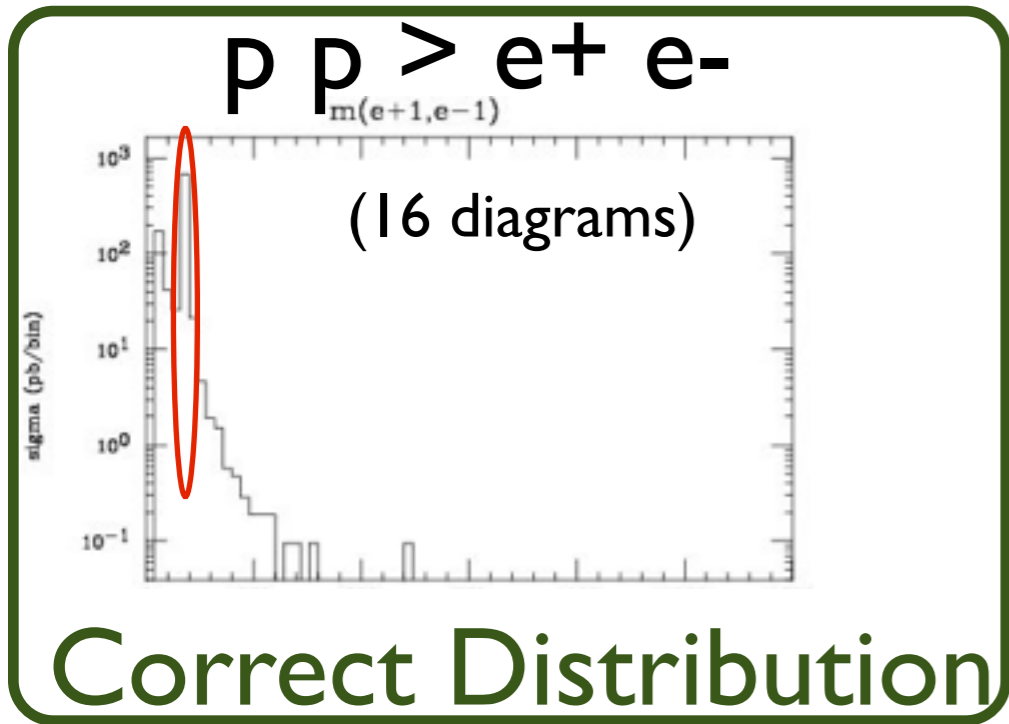

**NO Z Peak**

$pp \rightarrow e^+e^- \text{ } z$   
 $m(e^+e^-)$

**No Z**

**Z- onshell veto**

**Z Peak**

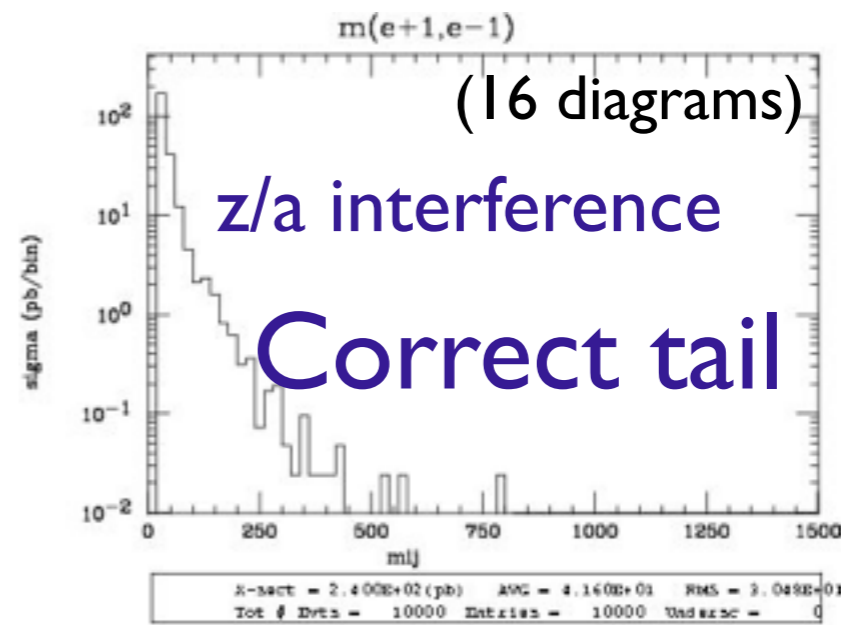

$pp \rightarrow e^+ e^- / z$   
 $m(e^+, e^-)$

**NO Z Peak**

**No Z**

$pp \rightarrow e^+ e^- \text{ } z$   
 $m(e^+, e^-)$

**Z- onshell veto**

$p p \rightarrow e^+ e^-$ 
 $p p \rightarrow z, z \rightarrow e^+ e^-$ 
 $p p \rightarrow e^+ e^- \$ z$ 

(16 diagrams)

(8 diagrams)

(16 diagrams)

## Onshell cut: BW\_cut

$$|M^* - M| < BW_{cut} * \Gamma$$

- The Physical distribution is (very close to) exact sum of the two other one.
- The “\$” forbids the Z to be onshell but the photon invariant mass can be at MZ.
- The “/” is to be avoid if possible since this leads to violation of gauge invariance.

# WARNING

- NEXT SLIDE is generated with `bw_cut = 5`
- This is **TOO SMALL** to have a physical meaning (15 the default value used in previous plot is better)
- This was done to **illustrate** more in detail how the “\$” syntax works.

$$pp \rightarrow e^+ e^- / Z$$

$$pp \rightarrow e^+ e^- / Z$$

$$\text{adding } pp \rightarrow e^+ e^- \text{ } Z$$

$$pp \rightarrow e^+ e^- / Z$$

$$\text{adding } pp \rightarrow e^+ e^- \text{ } \cancel{Z}$$

- Z onshell veto

$$p p \rightarrow e^+ e^- / Z$$

$$\text{adding } p p \rightarrow e^+ e^- \text{ } \$ Z$$

- Z onshell veto
- In veto area only photon contribution

$$p p \rightarrow e^+ e^- / Z$$

$$\text{adding } p p \rightarrow e^+ e^- \text{ } \$ Z$$

- Z onshell veto
- In veto area only photon contribution
- area sensitive to z-peak

$$p p \rightarrow e^+ e^- / Z$$

$$\text{adding } p p \rightarrow e^+ e^- \text{ } \$ Z$$

5 times width area

15 times width area

>15 times width area

- Z onshell veto
- In veto area only photon contribution
- area sensitive to z-peak
- very off-shell Z, the difference between the curve is due to interference which are **need to be KEPT** in simulation.

$$p p > e^+ e^- / Z$$

$$\text{adding } p p > e^+ e^- \$ Z$$

5 times width area

15 times width area

>15 times width area

The “\$” can be use to split the sample in BG/SG area

- Z onshell veto
- In veto area only photon contribution
- area sensitive to z-peak
- very off-shell Z, the difference between the curve is due to interference which are need to be **KEPT** in simulation.

- Syntax Like

- $p p \rightarrow z \rightarrow e^+ e^-$

(ask one S-channel z)

- $p p \rightarrow e^+ e^- / z$

(forbids any z)

- $p p \rightarrow e^+ e^- \$\$ z$

(forbids any z in s-channel)

- ARE NOT GAUGE INVARIANT !
- forgets diagram interference.
- can provides un-physical distributions.

- Syntax Like

- $p p \rightarrow z \rightarrow e^+ e^-$

(ask one S-channel z)

- $p p \rightarrow e^+ e^- / z$

(forbids any z)

- $p p \rightarrow e^+ e^- \$\$ z$

(forbids any z in s-channel)

- ARE NOT GAUGE INVARIANT !
- forgets diagram interference.
- can provides un-physical distributions.

# Avoid Those as much as possible!

- Syntax Like

- $p p \rightarrow z \rightarrow e^+ e^-$

(ask one S-channel z)

- $p p \rightarrow e^+ e^- / z$

(forbids any z)

- $p p \rightarrow e^+ e^- \$\$ z$

(forbids any z in s-channel)

- ARE NOT GAUGE INVARIANT !
- forgets diagram interference.
- can provides un-physical distributions.

# Avoid Those as much as possible!

check physical meaning and gauge/Lorentz invariance if you do.

- Syntax like
  - $p p \rightarrow z, z \rightarrow e^+ e^-$  (on-shell  $z$  decaying)
  - $p p \rightarrow e^+ e^- \cancel{z}$  (forbids s-channel  $z$  to be on-shell)
- Are linked to cut  $|M^* - M| < BW_{cut} * \Gamma$
- Are more safer to use
- Prefer those syntax to the previous slides one

# Exercise III: scripting

- Look at the cross-section for the previous process for 3 different mass points.
  - ➔ **hint:** you can edit the param\_card/run\_card via the “set” command [After the launch]
  - ➔ **hint:** All command [including answer to question] can be put in a file.

# Exercise III: scripting

- File content:

```
import model sm
generate p p > t t~
output
launch
set mt 160
set wt Auto
done
launch
set mt 165
set wt Auto
launch
set mt 170
set wt Auto
launch
set mt 175
set wt Auto
launch
set mt 180
set wt Auto
launch
set mt 185
set wt Auto
```

- Run it by:

- `./bin/mg5 PATH`

- (smarter than `./bin/mg5 < PATH`)
