

What is MadGraph 5? (and what is all the fuss about?)

KIAS MadGrace school, Oct 24-29 2011

mardi 25 octobre 2011

MadGraph 5 Olivier Mattelaer

MadGraph 5

J.A., Herquet, Maltoni, Mattelaer, Stelzer, arXiv:1106.0522

- MadGraph 5 is the successor of the well-known MadGraph matrix element generator
- Original MadGraph by Tim Stelzer was written in Fortran, first version from 1994
 hep-ph/9401258
- Event generation by MadEvent using the single diagram enhanced multichannel integration technique in 2002 (Stelzer, Maltoni) hep-ph/0208156
- Full support for BSM (and many other improvements) in MG/ME 4 (2006-2008)

arXiv:0706.2334, arXiv:0809.2410

MadGraph 5

J.A., Herquet, Maltoni, Mattelaer, Stelzer, arXiv:1106.0522

- MadGraph 5 development started in 2009
- Language chosen: Python
 - Exceptional flexibility and speed where needed
 - ➡ Easy to create modular structure (OO)
 - Automatic documentation
 - Easy to incorporate test suite
- New algorithms with exceptional speedups and generalizations for every aspect of the code

Super-fast decay chains allow completely new types of processes!

KIAS MadGrace school, Oct 24-29 2011

•
$$p p > t t \sim w+, (t > w+ b, w+ > |+ v|), (t \sim > w- b \sim, w- > j j), (w+ > |+ v|)$$

- Separately generate core process and each decay
 Decays generated with the decaying particle as resulting wavefunction
- Iteratively combine decays and core processes
- Difficulty: Multiple diagrams in decays

• If multiple diagrams in decays, need to multiply together core process and decay diagrams:

 If multiple diagrams in decays, need to multiply together core process and decay diagrams:

u u~ > go go / ur, go > u u~ nl / ur

KIAS MadGrace school, Oct 24-29 201 I

MadGraph 5 Olivier Mattelaer

mardi 25 octobre 2011

- Decay chains retain **full matrix element** for the diagrams compatible with the decay
- Full spin correlations (within and between decays)
- Full width effects
- However, no interference with non-resonant diagrams
 - Description only valid close to pole mass
 - Cutoff at $|m \pm n\Gamma|$ where n is set in run_card.

Results for g g > go go, $(go > t1 t \sim, t \sim > b \sim all all / h +, (t1 > t n1, t > b all all / h +))$ in the mssm

No problem running processes like $t\bar{t} + 0, 1, 2j$ on a laptop!

KIAS MadGrace school, Oct 24-29 2011

mardi 25 octobre 2011

New MadEvent output

- New scheme for organizing MadEvent processes
 - Combine all processes with same type of initial/ final states (color, spin, mass, width)
 - Combine all integration channels (diagrams) with same pole structures (and permutations)

Example: p p > l+ l- j j has subprocess directories: gg>llqq - gq>llgq - qq>llgg - qq>llqq

with 8 16 10 14 int. channels

New MadEvent output

- New scheme for organizing MadEvent processes
 - Combine all processes with same type of initial/ final states (color, spin, mass, width)
 - Combine all integration channels (diagrams) with same pole structures (and permutations)

 Example: p p > I+ I- j j has subprocess directories: gg>llqq - gq>llgq - qq>llgg - qq>llqq
 Corresponding to 2 4 2 20 matrix elements with 8 16 10 14 int. channels
 Compare with a total of 486 integration channels in MG4!

New MadEvent output

• Mapping/combination of similar integration channels:

KIAS MadGrace school, Oct 24-29 2011

MadGraph 5 Olivier Mattelaer

mardi 25 octobre 2011

News in MadGraph 5

- Super-fast decay chains
- Allow model vertices with any Lorentz structures, color structures, and any number of particles
- New color structures (color sextets and ε^{ijk})
- New, compact organization of subprocess directories and integration channels in MadEvent
- Output of matrix elements in Fortran (for MadEvent) or C++ (for Pythia 8)
- Automatic writing of models and helicity amplitudes for any Lorentz structures in Fortran or C by UFO-ALOHA
- Really user-friendly command line interface!

Output formats in MadGraph 5

- Thanks to UFO/ALOHA, we now have automatic helicity amplitude routines in any language
 - So it makes sense to have also matrix element output in multiple languages!

Output formats in MadGraph 5

- Thanks to UFO/ALOHA, we now have automatic helicity amplitude routines in any language
 - So it makes sense to have also matrix element output in multiple languages!
- Presently implemented: Fortran, C++, Python
 - Fortran for MadEvent and Standalone
 - ➡ C++ for Pythia 8 and Standalone
 - Python for internal use in MG5 (checks of gauge, perturbation and Lorentz invariance)

Pythia 8 Matrix Element output

- Library of process .h and .cc files, sorted by model
 - + all needed model and helicity amplitude files
 - + example main file (for user convenience!)
- Run as standard internal Pythia processes
- Allows using Pythia for ANY (2→1,2,3) process in ANY model at the push of a key!

Pythia 8 Matrix Element output

 - + all needed model and helicity amplitude files
 - + example main file (for user convenience!)
- Run as standard internal Pythia processes
- Allows using Pythia for ANY (2→1,2,3) process in ANY model at the push of a key!

Sigma_sm_qq_ttx.h

```
#include "SigmaProcess.h"
#include "Parameters sm.h"
using namespace std;
namespace Pythia8
// A class for calculating the matrix elements for
// Process: u u~ > t t~
// Process: c c~ > t t~
// Process: d d~ > t t~
// Process: s s~ > t t~
//-----
class Sigma sm qq ttx : public Sigma2Process
 public:
   // Constructor.
   Sigma sm qq ttx() {}
   // Initialize process.
   virtual void initProc();
   // Calculate flavour-independent parts of cross section.
   virtual void sigmaKin();
   // Evaluate sigmaHat(sHat).
   virtual double sigmaHat();
   // Select flavour, colour and anticolour.
   virtual void setIdColAcol();
```

Implementation of New Physics models in MadGraph

KIAS MadGrace school, Oct 24-29 201 I

mardi 25 octobre 2011

MadGraph 5 Olivier Mattelaer

Specification of a physics model

A new physics model can be defined by:

- Field content + Lagrangian
- Particle content + Feynman rules + coupling definitions

+ Parameters, masses, widths

Specification of a physics model

A new physics model can be defined by:

Field content + Lagrangian

Particle content + Feynman rules + coupling definitions

Suitable for Matrix Element generators

+ Parameters, masses, widths

Specification of a physics model

A new physics model can be defined by:

+ Parameters, masses, widths

KIAS MadGrace school, Oct 24-29 2011

Implementing New Physics Models

Ways to implement your own model in MadGraph:

- Modify existing model (e.g. only changing couplings or simplifying it)
- User model framework (new particles/interactions)
 - I. Add new particles
 - 2. Add new interactions
 - 3. Enter expressions for the new couplings
 - 4. Script generates all needed Fortran files!
- FeynRules
 - Directly from Lagrangian to implementation

Thanks for listening!

- This afternoon it will be your turn to practice!
- Generate processes, generate events, perform analyses
- Lots of fun!

KIAS MadGrace school, Oct 24-29 2011

- Easy and quick implementation, especially when complexity of added sector is not too large
- Example:
 QCD T' pair production with
 T' → A_ht in Little Higgs
 model with T parity

$$A^{\mu}_{H} \bar{t}'_{-} t \qquad \frac{2ig'}{5} c_{\lambda} \gamma_{\mu} \left(c_{\lambda} \frac{v}{f} P_{L} + P_{R} \right)$$

Specify new particles and interactions

particles.dat

| #Name a | anti_Name | Spin | Linetype | Mass | Widt | ch Color | Labe | l Mod | lel |
|---------|-----------|------|----------|------|------|----------|------|-------|------|
| #xxx | xxxx | SFV | WSDC | str | str | STO | str | PDG | code |
| #MODEL | EXTENSION | | | | | | | | |
| tp | tp~ | F | S | TPN | MASS | TPWIDTH | Т | TP | 8 |
| zp | zp | v | W | ZPN | MASS | ZPWIDTH | S | ZP | 32 |
| # END | _ | | | | | | | | |

interactions.dat

| # | USRVertex | | | | | | | | |
|----|-----------|------|-------|-----|--|--|--|--|--|
| tp | tp | g GC | G QCD | | | | | | |
| tp | t | zp | GTPZP | QED | | | | | |
| t | tp | zp | GTPZP | QED | | | | | |

Define external parameters

VariableName.dat

param1 #first variable name

Run script. Modify couplings

couplings.f

You are ready to start generating processes!

• Remember: v4 models are imported with import model_v4 modelname

mg5>import model_v4 tpzp mg5>generate p p > tp tp~, tp > zp t, tp~ > zp t~ mg5>output mg5>launch

- -> C 🔇 file://localhost/Users/alwall/MadGraph5_v1_3_23/PROC_tpzp_0/HTML/crossx.html 😪

Results for p p > tp tp~, tp > zp t , tp~> zp t~ in the tpzp

Available Results

| Links | Events | Tag | Run | Collider | Cross section (pb) | Events |
|----------------|------------------------|-------|--------|------------------------|--------------------|--------|
| results banner | Parton-level LHE plots | fermi | run_01 | p p 7000 x 7000 GeV | .80594E+01 | 10000 |
