

How do I get nice plots automatically when running generate_events, like I get on the web?

You need to first download the [MadAnalysis](#) package from a [MadGraph](#) Download page, untar it in the MadGraph5_vx_x_x directory and run "make". Then download Topdrawer (link provided on the same page) and place it in the directory "td" under MadGraph5_vx_x_x. The generate_events script looks for the [MadAnalysis](#) executable at `../MadAnalysis/plot_events` (seen from the process directory), and for the [TopDrawer](#) executable at `../td/td`. Now generate_events will automatically run plot generation on your events.
